Sulyab..the PPT is gonna be about 10 slides long

First 2-3 slides would be the topic and the explanation of the topic...i.e What we are working on

Next 3-4 slides would contain our motivations behind this project. What is the past work done in this field...and why using strokes (which is a new idea) is better..(as it emulates the human way of recognising characters)

Last 3-4 slides would contain what we have done. Mention the steps we have done superficially Dont go into mathemetical detail.Just put the summary section from the link : http://dataera.org/2014/04/notes-on-em-and-plsa/

Also while explaining PLSI dont forget to put the table(Term Document Matrix) something like which is given in this link : http://www.ece.umd.edu/~smiran/PLSI.pdf
